CRIMINAL JUSTICE AGENCY PROCESSING STATISTICS

INTRODUCTION

IN AN EFFORT TO ASSIST DECISION MAKERS, THE OFFICE OF RESEARCH AND STATISTICS DEVELOPED THIS DOCUMENT TO PROVIDE A SYNOPSIS OF THE TRENDS IN CRIMINAL JUSTICE PROCESSING STATISTICS WHICH HAVE OCCURRED OVER THE MOST RECENT FISCAL YEARS. AN EFFORT HAS BEEN MADE TO CAPTURE ON A MONTHLY BASIS STATISTICAL DATA WHICH PROVIDES SOME INDICATORS AS TO THE CHANGES IN OFFENSE AND ARREST PATTERNS, LOCAL JAIL POPULATIONS, PAROLE AND PROBATION CASELOADS, STATE CORRECTIONAL INSTITUTION POPULATIONS AND PAROLING AUTHORITY ACTIVITIES. IN EACH SECTION OF THE REPORT A BRIEF DESCRIPTION OF THE DATA SOURCES AND RECENT TRENDS IS PRESENTED. THIS REPORT ACTS AS A 'SNAPSHOT' OF THE EVENTS WHICH HAVE OCCURRED OVER THE PAST TWO FISCAL YEARS. CAUSE-EFFECT RELATIONSHIPS CANNOT BE DRAWN FROM THE VARIOUS DATA PRESENTED. HOWEVER, RELATIONSHIPS IN TRENDS CAN AID USERS OF THIS DOCUMENT IN OBTAINING A PICTURE OF POSSIBLE FUTURE TRENDS.

OFFENSES AND ARRESTS

Data Sources

The information contained in the offenses and arrests section of the Agency Processing Statistics is based upon data tabulated through the State-wide Uniform Crime Reporting program managed by the Maryland State Police Criminal Records Central Repository (CRCR). Each month summary data on offenses and arrests is compiled and submitted to CRCR by each of Maryland's 134 law enforcement agencies. These reports are then edited and prepared for data entry. Computer generated output reports are then produced to summarize the information received in a variety of formats. CRCR then provides monthly summaries of the offense and arrest data to the Office of Research and Statistics.

Comparisons of data trends occurring between FY 1984 and FY 1983 have been graphically depicted in charts. Index Offenses - Total, Property and Violent are displayed (page 3) as well as a comparison of Total Offenses (reported) and Adult Arrests (page 4). Data associated with these graphs is provided in tables for each fiscal year (pages 5 and 6). A quarterly comparison of the change in reported index offenses over these two fiscal years is also provided (page 7).

Recent Trends

Total offenses were down 7.8% from 246,086 in FY 1983 to 226,907 in FY 1984. This decreasing trend occurred in each index crime category with the exception of Rape which increased very slightly from 1,491 in FY 1983 to 1,498 in FY 1984, a 0.5% increase. Combined categories of offense data shows that violent offenses (murder, rape, robbery and aggravated assault) decreased 4.7% from 35,782 in FY 1983 to 34,109 for FY 1984. Property Offenses (burglary, larceny and motor vehicle theft) decreased 8.3% from 210,304 in 1983 to 192,798 in 1984. See page 3 for a visual comparison and pages 5, 6 & 7 for the actual data.

Adult arrests (those individuals 18 and over) decreased 3.5% from 172,665 in FY 1983 to 166,653 in FY 1984. The chart on page 4 depicts the monthly adult arrest trend based on the data in the tables on pages 5 and 6. It should be noted that the offense data is collected for only index crimes (murder, rape, robbery, aggravated assault, burglary, larceny and motor vehicle theft) and only when they are reported. Arrest data encompasses not only index crimes but other crimes. These other crimes are generally considered less serious and include such offenses as simple assault, possession or sale of drugs, sex offenses other than rape, weapons possession, fraud, vandalism, etc. These two sets of data (offenses and arrests) are mutually exclusive and difficult to compare to each other. Therefore, no direct relationship between these trends can be drawn.

Data on juvenile arrests (those individuals 17 years old or younger) shows a declining trend (see tables at pages 5 & 6). The number of juveniles arrested in FY 1984 was 37,789, a 7.3% decrease from the 40,776 juveniles arrested in FY 1983. The number of juvenile arrests for FY 1982 was 45,822 indicating this decrease to be a continuing trend.

LOCAL JAIL STATISTICS

Data Sources

The information contained in this section of the Agency Processing Statistics is derived from statewide manual data collection efforts by the staff of the Maryland Commission on Correctional Standards. Commission staff tabulates and summarizes data submitted by local jurisdictions. Statewide aggregate data reflecting monthly based trends for Fiscal Years 1983 and 1984, spanning all local jurisdictions, are graphically displayed in the following charts: Average Daily Population in Local Jails, Local Versus DOC Sentenced Inmates and Awaiting Trial, PSI and Other (Jail Population). The fiscal year data (1983-1984) used to derive these charts is presented in the tables on pages 12 and 13.

Recent Trends

The average daily aggregate population in local jails for FY 1984 stabilized at 4,528 after several years of increases (average daily population FY 1981 - 3,654; FY 1982 - 4,224; FY 1983 - 4,524). The average daily population for the last month of the fiscal year (June) reflects a slight decrease (1.3%) between FY 1983 (4,529) and FY 1984 (4,471). Visual comparison of the graphic representation of the Average Daily Population in Local Jails reveals that average population levels for the later months of FY 1984 did not equal the levels for the corresponding months of the previous fiscal period.

This apparent stabilization is also observed in the difference in rates of intakes and departures. After several years of net gain (FY 1982 - 42 and FY 1983 - 15) current averaged intakes per month are nearly equal to averaged departures (5,820 to 5,818). The tables on pages 12 and 13 reflect the monthly ratio of intakes to departures.

The graphic representation of data reflecting the sentencing and processing patterns may provide some insight on trends contributing to the apparent stabilization of population levels (see charts at pages 10 and 11). Both charts indicate that seasonal variations appear at intervals in the winter with dramatic trend line reversals. The average for locally sentenced inmates increased from 1,259 in FY 1983 to 1,413 in FY 1984, an increase of 12.3%. The graphic representation on page 10 indicates that most of the local sentences were imposed between January and April 1984. The end of year (June) average for local sentenced inmates reflects a 9% increase between FY 1983 (1,301) and FY 1984 (1,418). Variation in the average DOC sentenced inmates appears insignificant (see page 10). The graphic chart for Local Jails: Awaiting Trial, Pre-Sentence Investigation and Other (see page 11) suggest there are trends offsetting the increase in locally sentenced inmates. The average number of awaiting inmates has decreased by 5.2% between FY 1983 (3,137) and FY 1984 (2,975). The most significant sub-group is the Inmates Awaiting Trial which decreased by a monthly average of over 300 cases for the last 6 months of FY 1984 as compared to the corresponding period of FY 1983 (see pages 12 and 13). These offsetting trends may influence the average daily population trend resulting in the apparent stabilization of the population levels.

Caution must be used in extrapolating this data in the context of local conditions at each jail and detention center.

PAROLE AND PROBATION STATISTICS

Data Sources

The information contained in the Division of Parole and Probation section of the Agency Processing Statistics is based upon a combination of manual and automated information systems that are summarized on a State-wide basis by the Office of Research and Statistics. From July, 1983 through January of 1984, the cases under Active Supervision (see charts at pages 19 & 20 and tables at pages 25 & 26) and Cases Being Administered (see charts at pages 21 & 22 and tables at pages 27 & 28) were manually compiled by all supervision agents for their individual caseloads as of the last day of each month and totalled by the Division's Headquarters staff in the Division's Monthly Workload Summary report. Beginning in February, 1984, the Division of Parole and Probation converted from using manually collected data to relying on the OBSCIS II automated system for reporting the supervision workload. Similarly, the intake data (see charts at pages 15 & 16 and tables at pages 23 & 24) for Fiscal Year 1984 was extracted from the OBSCIS II System. Case Closings data (see charts at pages 17 & 18 and Tables at pages 23 & 24) was derived by means of a formula comparing intakes to monthly changes in the Cases Being Administered totals.

Recent Trends

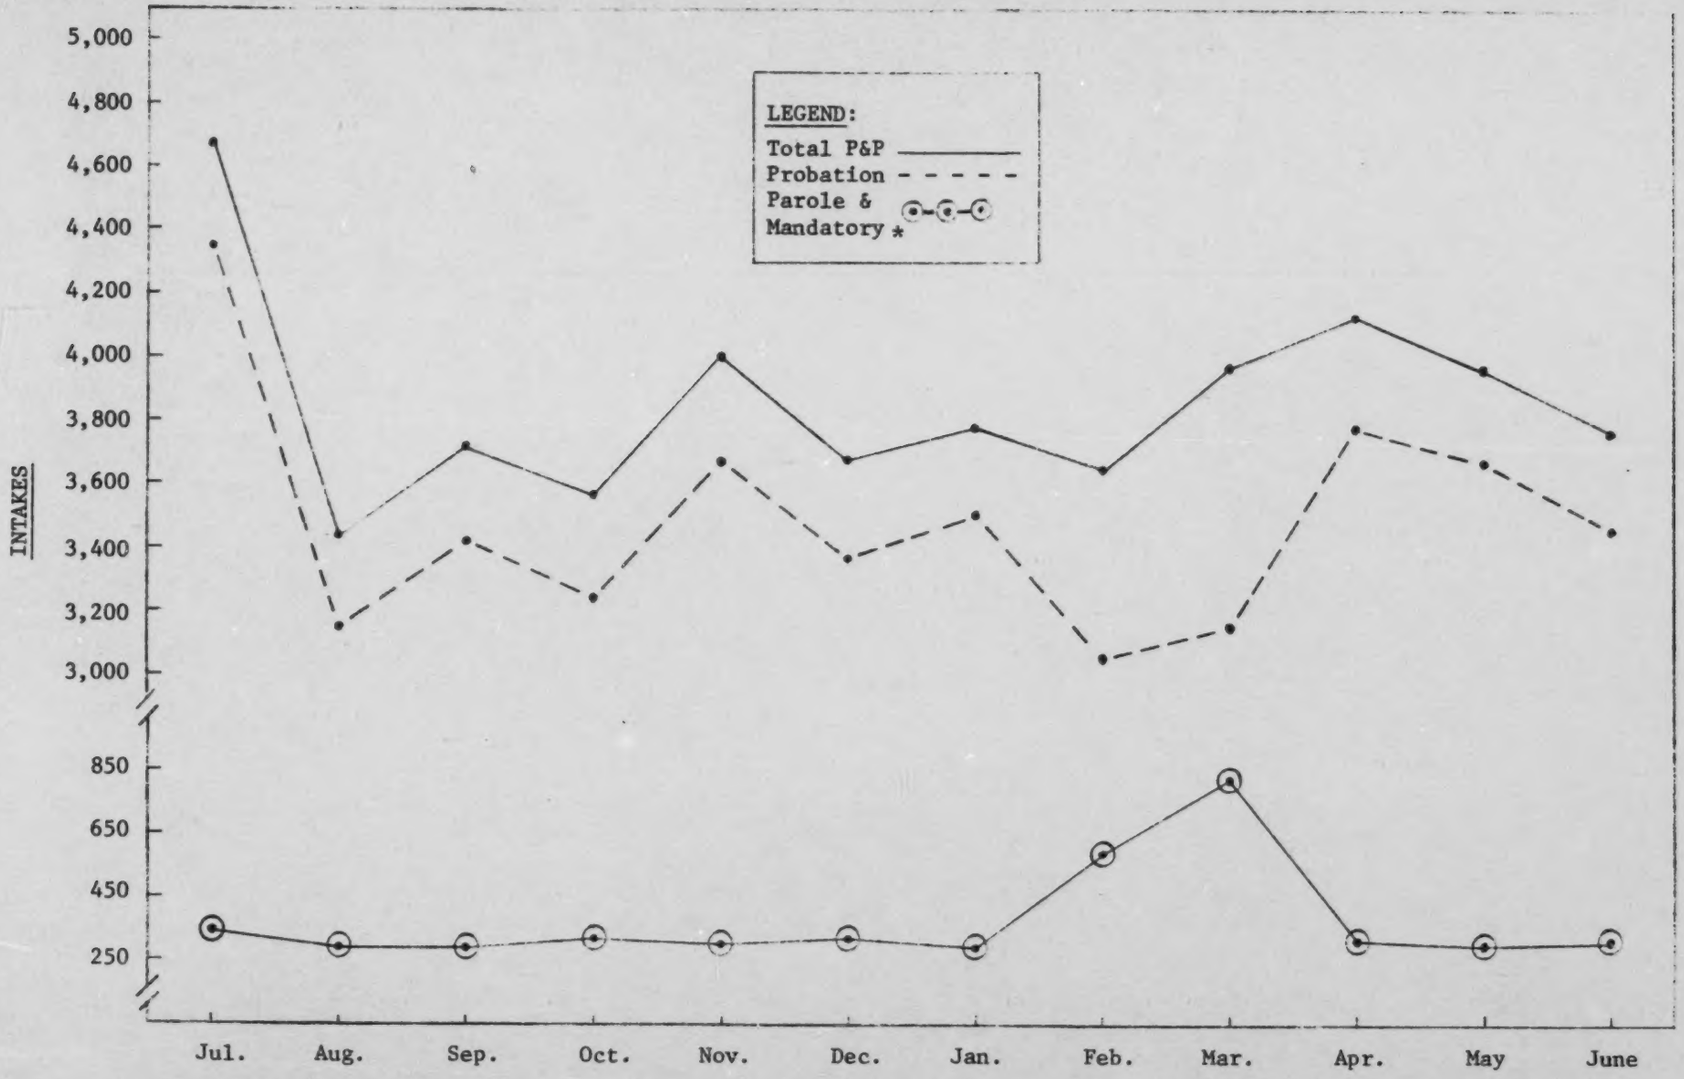
During Fiscal Year 1984, the Division's Cases Under Active Supervision fell from 47,593 to 46,845 cases, representing an annual decrease of 1.6%. This compares to an annual growth of 18.5% during FY 1983 (see charts at pages 19 & 20 and tables at pages 25 & 26). While Active Cases went down slightly, Total Cases Being Administered by the Division increased 8.2%, or 5,936 cases, over FY 1983. This compares to a 19.0% growth in FY 1983 (see charts at pages 21 & 22 and tables at pages 27 & 28).

The primary factor contributing to the lower percentage increase in Total Cases Administered during FY 1984 was a leveling off of the new case intakes. The total number of case intakes processing during FY 1984 grew from 45,549 to 46,418, an increase of only 1.9%. However, case closings grew from 34,039 in FY 1983 to 40,482 in FY 1984, an increase of 18.9%. This reduced the gap between Intakes and Closings causing some leveling in the previously dramatic growth patterns experienced in FY 1983.

The intake area that continues to grow at a rapid pace is mandatory release, which went from 1,395 cases in FY 1983 to 2,510 cases in FY 1984, a 79.9% increase. This mandatory release intake growth caused the active mandatory case counts to increase by 124%, from 398 at the end of FY 1983 to 890 at the end of FY 1984. Although this overall growth trend is supported by the Division of Correction data, the conversion of manual to automated data by the Division of Parole and Probation has created the erroneous impression that most of this growth occurred in February and March of 1984. In reality, this growth has been occurring in a uniform fashion over the last two fiscal years.

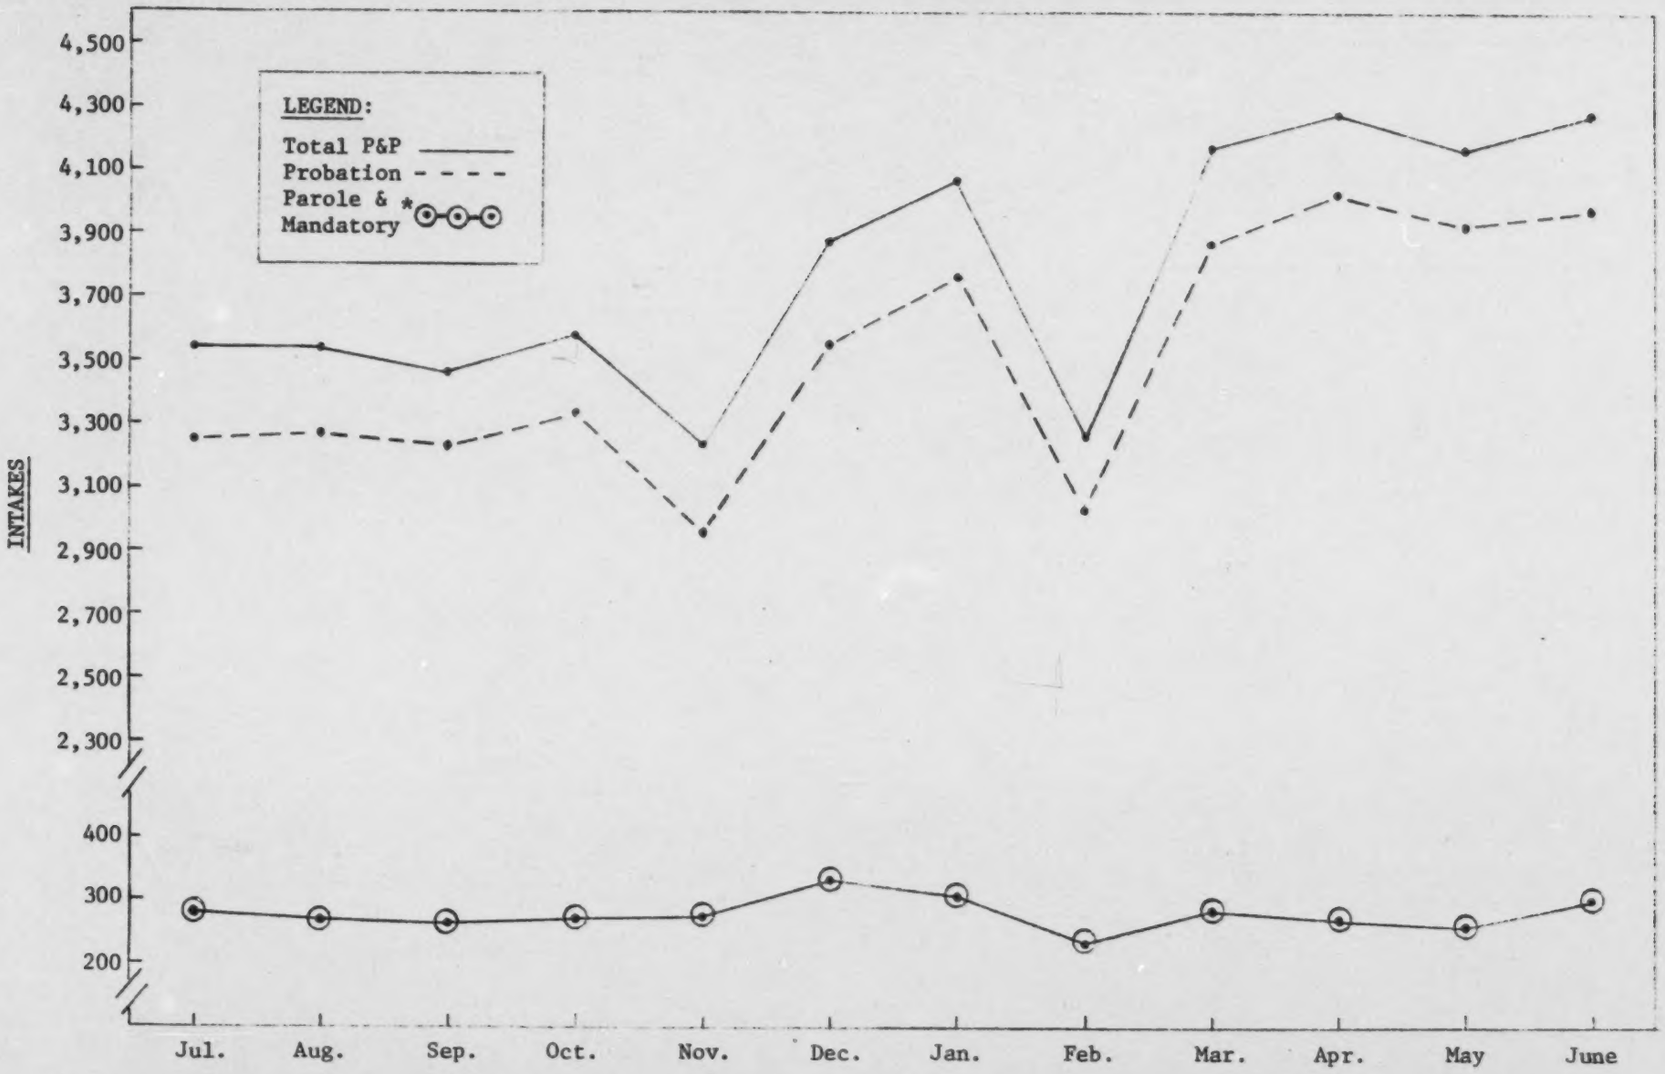
The increase in Cases Being Administered and the simultaneous decrease in Cases Under Active Supervision category reflects a steadily growing percentage of Non-Active and delinquent cases in the Cases Being Administered category. At the end of FY 1983, 66% of the Cases Being Administered were in an active status (i.e. not delinquent or non-active). By the end of FY 1984, only 60% of the Total Cases Being Administered were under active supervision.

FY 84 DIVISION OF PAROLE AND PROBATION INTAKES



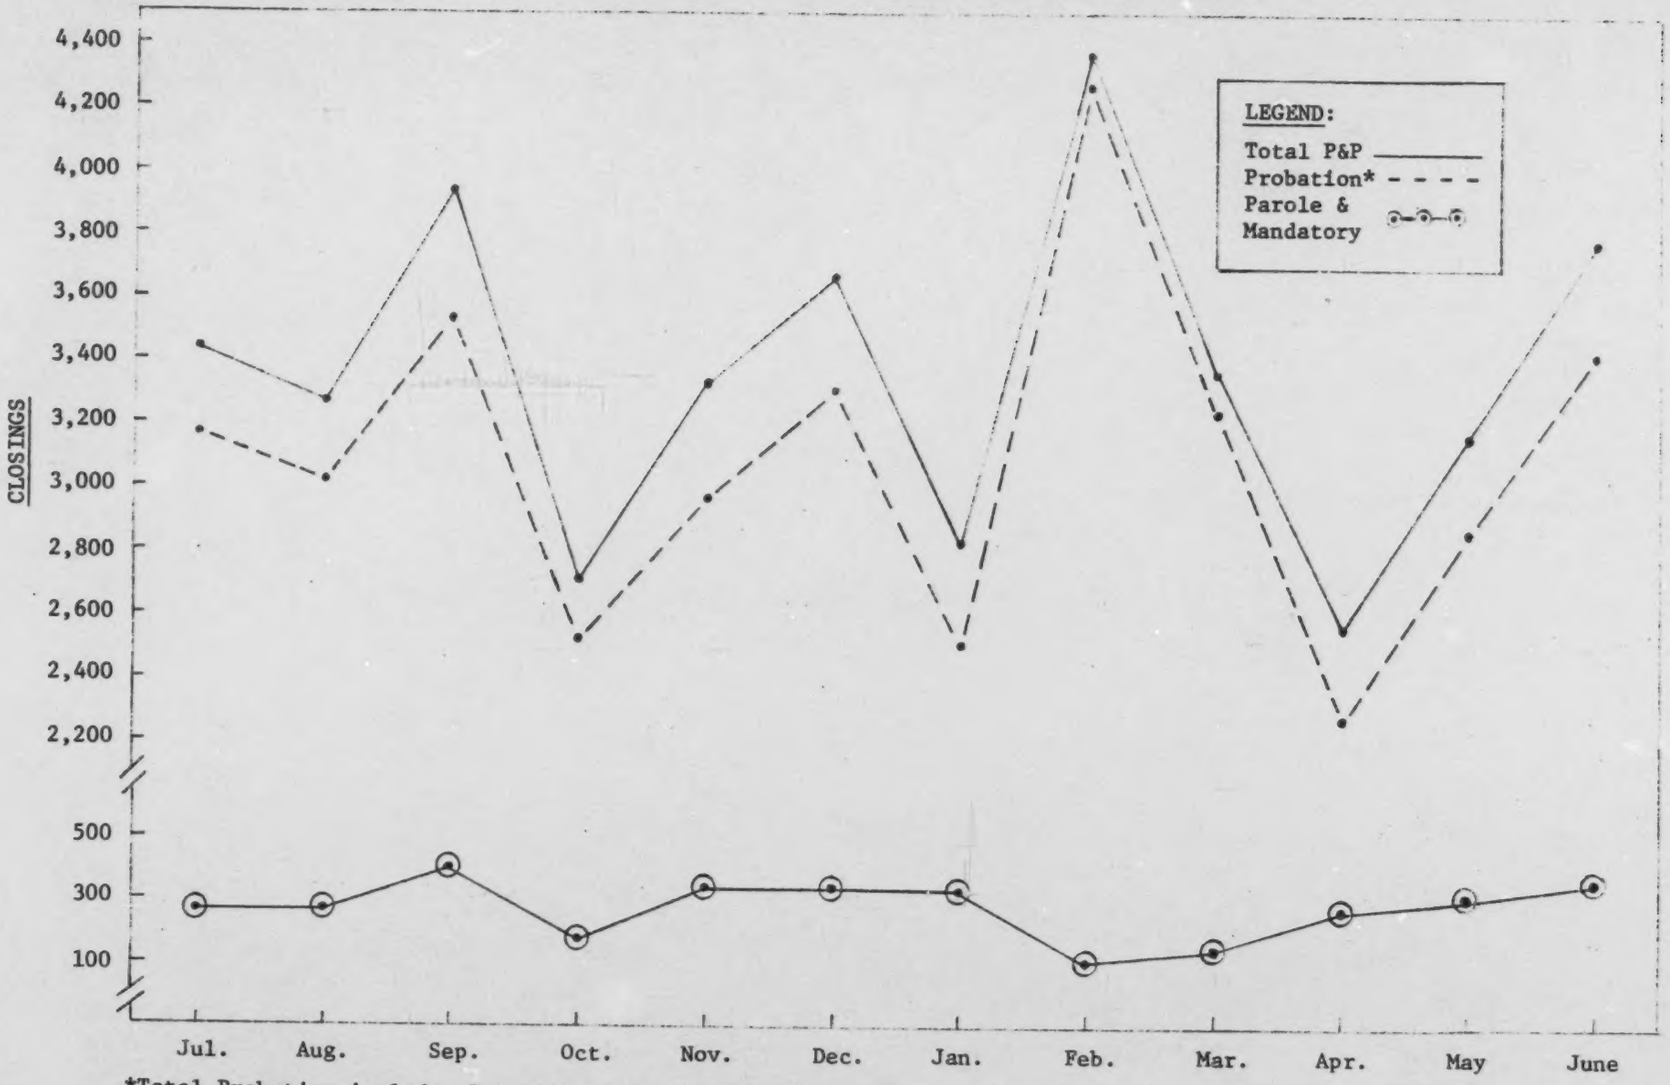
*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction.

FY 83 DIVISION OF PAROLE AND PROBATION INTAKES



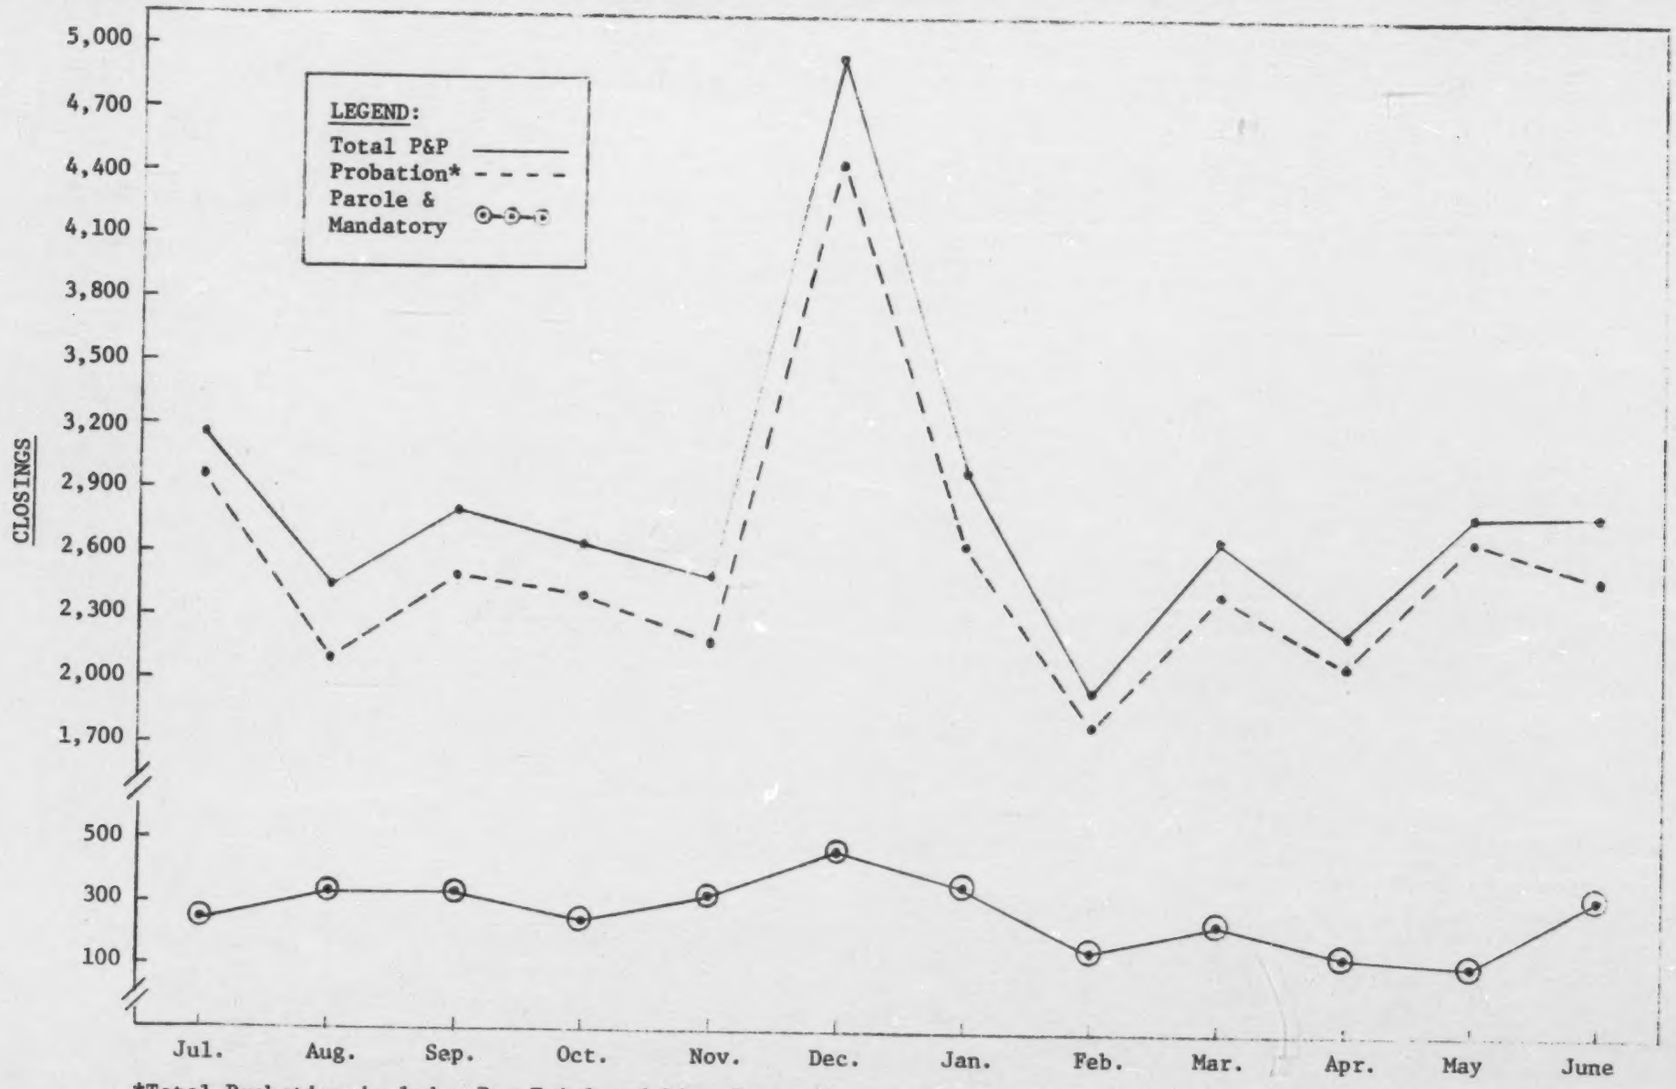
*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction.

FY 84 DIVISION OF PAROLE AND PROBATION CASE CLOSINGS



*Total Probation includes Pre-Trial and Live-In Cases.

FY 83 DIVISION OF PAROLE AND PROBATION CASE CLOSINGS



*Total Probation includes Pre-Trial and Live-In cases.

PROBATION, COMPACT PROBATION AND LIVE-IN CASES
UNDER ACTIVE SUPERVISION BY DIVISION OF PAROLE AND PROBATION
(Fiscal Years 1983 and 1984)

DIVISION OF CORRECTION STATISTICS

Data Sources

The information contained in the Division of Correction section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized at the Office of Research and Statistics. The monthly average total populations (see charts at pages 31, 32 & 34 and table at page 38) are calculated from daily population sheets submitted by the Data Processing Office of the Division of Correction. The daily population sheets are manually compiled at Division Headquarters based on telephone reports from each institution. Intake and Release information (see charts at pages 31, 32, 33, 35, 36 & 37 and tables at pages 39 & 40) is compiled from monthly reports sent to the Research and Statistics Office by the individual DOC institutions. Average sentence length by jurisdiction and life and death sentence by jurisdiction information (see tables at pages 41, 42, 43 & 44) is based upon information from the male and female reception centers. This information is also received monthly and applies only to new court commitments.

The Inmate Characteristics Report (see tables at pages 45 thru 51) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that manual population data is used in the Sex Distribution table at page 45 to allow comparisons to be made between the actual population and the computerized counts for each institution. All of the remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During FY 1984, the Division's average daily total population has grown from 11,685 (July 1983) to 12,434 (June 1984), which represents a 6.4% increase over that period. It is notable that although the population is still increasing, the rate of population growth is considerably less than the 11.2% rate of growth that occurred in FY 1983 when the Division's average daily population went from 10,449 (July 1982) to 11,624 (June 1983). Population data is displayed on the charts at pages 31, 32 & 34 and the table at page 38.

The most significant factors contributing to continuing population growth are the contrasting trends of intakes and releases during FY 1984. Total intakes numbered 6,018, or 502 per month during FY 1984, while releases for the same period were 5,043 or 420 per month. Total intakes during FY 1984 are 2.8% less than during FY 1983, while total releases have increased by 4.2%. Intake and release information is presented on data tables at pages 39 & 40 and the charts at pages 31, 32, 33, 35, 36 & 37.

Of particular interest is the decrease in processed court commitments in combination with the increase in releases that has slowed the rate of population growth. Processed court commitments decreased by 3.0% from 5,232 in FY 1983 to 5,076 in FY 1984. Expiration/Mandatory releases have increased by 26.4% from 2,003 in FY 1983 to 2,531 in FY 1984. Parole releases during this same period have decreased by 14.0% from 1,752 to 1,507. The increase in Expiration/Mandatory releases has continued to alter the relationship between Parole and Expiration/Mandatory releases that has existed in past years. 2,531 or 62.7% of the 4,038 combined Parole and Expiration/Mandatory releases were by Expiration/Mandatory release in FY 1984. Expiration/Mandatory releases accounted for 53.3% of the Expiration/Mandatory-Parole combination in FY 1983 and 43.1% in FY 1982. (See data tables at pages 39 & 40 and charts at pages 35 & 36.)

Escape releases, presented on the data tables at pages 39 & 40 and the chart on page 37, have been reduced by 12.4% from 121 in FY 1983 to 106 in FY 1984. Correspondingly, the intake category of Returned from Escape decreased from 187 in FY 1983 to 144 in FY 1984, a 23.0% reduction.

The average length of sentence for new court commitments (see tables at pages 41 and 43) is 61 months, a 1 month decrease from 1983. Despite the stability of the overall length of sentence, there was considerable variation between jurisdictions. Life sentences to the Division have increased by 12.5% from 72 in FY 1983 to 81 in FY 1984.

The Inmate Characteristics of the Division's population as of the end of FY 1984 are nearly unchanged from the end of FY 1983. The average age of the Division inmates remained at 29 years. The average sentence length of the Active inmates at year end increased by 3 months from 130 months at the end of FY 1983 to 133 at the close of FY 1984. The age, sentence, race and offense distributions have remained virtually unchanged between years.

*DOC sentenced inmates in local jails are indicated by parens and includes both males and females when applicable.

**Averages from July 1976 until June of 1978 were calculated by adding the populations on the 1st, 10th, and 20th of the respective month and dividing by 3.

***Averages since June of 1978 are based on the total number of days in the respective month for which a population report is received.

*The numbers (#) listed for each jurisdiction represent the actual number of court commitments for the respective months not including life sentences and death sentences. The average lengths of sentence (avg. LOS) were calculated using the high range of the following sentence ranges: 3 months, 4-6 months, 7-12 months, 13-18 months, 19-24 months, 25-36 months, 37-60 months, 61-96 months, 97-120 months, 121-180 months, 181 months and over. The high range was used because most sentences tend to fall at the upper end of each range. 300 months was used for the 181 months and over category.

**One inmate sentenced to 30 years was admitted under the interstate compact agreement and is included in this total.

*The numbers (#) listed for each jurisdiction represent the actual number of court commitments for the respective months not including life sentences and death sentences. The average lengths of sentence (avg. LOS) were calculated using the high range of the following sentence ranges: 3 months, 4-6 months, 7-12 months, 13-18 months, 19-24 months, 25-36 months, 37-60 months, 61-96 months, 97-120 months, 121-180 months, 181 months and over. The high range was used because most sentences tend to fall at the upper end of each range. 300 months was used for the 181 months and over category.

**One additional inmate committed from Baltimore City under Article 43, Sec. 98.

*The totals for the inmate characteristics contained in this report, with the exception of the sex distribution table, represent the OBSCIS system data available for the respective categories on the date of the report. The totals on the Sex Distribution table represent the actual total population on the date of the report. Information for an additional 115 inmates housed in local jails is not available. The automated information totals presented for Patuxent Institution are over counted by approximately 46 inmates due to data entry and coding inconsistencies.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is approximately 2 months.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is approximately 2 months.

***Due to rounding, the total of percentages may not equal 100%.

PAROLE COMMISSION STATISTICS

Data Sources

The information contained in the Parole Commission section of the Agency Processing Statistics is based upon data recorded by Parole Commissioners and Hearing Officers and tabulated monthly by Parole Commission staff from hearing dockets. Starting with this reporting period, Parole Commission activities relating to both Division of Correction and local jail inmates are reported. There is a minor data inconsistency amounting to less than one-half of a percent in aggregate between previously reported DOC related activities for Fiscal Year 1983 and the current report for the same period.

The Parole Hearing data presented in charts at pages 53 through 59 and the tables at pages 62 and 63 are based upon the recommendations rendered by Parole Commission Hearing Officers and Parole Commissioners during an inmate's parole hearing. The four basic decisions that can be made are to 1) approve parole release; 2) refuse parole release; 3) reschedule the inmate for a rehearing at a later date; or 4) hold the decision in abeyance until further information is obtained to determine parole eligibility. The Parole Revocation Hearings dispositions presented in charts at pages 60 and 61 and the table at page 64 are based upon the decision rendered by Parole Commissioners when inmates have been charged with failing to comply with the conditions of their parole release. These charges of noncompliance with the conditions of release can be divided in two broad categories: New Offenses (where a parolee has been primarily charged with committing a new crime while under parole supervision) and Technical Violations (where the parolee is charged with failing to comply with such conditions of release as reporting to an agent, absconding from supervision, failing to attend treatment programs as directed, etc.). At the time of a revocation hearing, the Parole Commission can decide to revoke parole, continue parole supervision, hold the case for further information, or administratively close the case.

Recent Trends

During FY 1984, the Parole Commission conducted a total of 5,505 DOC parole hearings, which represents an 11.9% decrease from FY 1983 hearing totals (see Chart page 55 and Table at page 62). The rate of hearings resulting in parole approval stayed essentially the same: 22.9% in FY 1983 and 22.8% in FY 1984. The rate of hearings resulting in refusals increased slightly from 26.1% in FY 1983 to 28.9% in FY 1984. The rate of parole cases to be reheard at a later date increased somewhat more, from 28.3% in FY 1983 to 32.3% in FY 1984. The rate of cases held dropped appreciably in FY 1984, from 22.7% in FY 1983 to 16.0% in FY 1984.

During the current fiscal year, the Parole Commission conducted parole hearings for 1,016 jail inmates located in the jails and in the detention centers for the 23 counties and Baltimore City (see Charts at pages 58 and 59 and Table at page 63). This represents an increase of 0.7% over FY 1983. The rate of parole approval decreased from 29.5% in FY 1983 to 24.1% in FY 1984. Conversely, the rate for inmates disapproved for parole increased from 59.1% in FY 1983 to 66.2% in FY 1984. Rehearings scheduled increased slightly from 3.5% in FY 1983 to 4.0% in FY 1984. As with DOC cases held for further information, comparable jail cases also declined in FY 1984, from 7.9% of the total number of cases heard in FY 1983 to 5.6% of the total cases heard in FY 1984.

Parole revocation hearings for FY 1984 totaled 1,024 hearings, up 3.8% or 38 hearings from the FY 1983 total of 986 (see Charts at pages 60 and 61 and Table at page 64). The rates of cases continued on parole declined in FY 1984, from 21.3% of the total in FY 1983 to 16.8% of the total in FY 1984. Conversely, the rate of those revoked increased from 72.1% in FY 1983 to 76.9% in FY 1984. Cases held declined from 1.3% in FY 1983 to 0.3% in FY 1984 and cases closed administratively increased slightly from 5.3% in FY 1983 to 6.0% in FY 1984. Of the 788 parolees revoked in FY 1984, 89.7% were revoked for new offenses and 10.3% were revoked for technical offenses. This represents only a small change from the FY 1983 rates of 87.3% and 12.7%, respectively.

PATUXENT INSTITUTION

Data Sources

The information contained in the Patuxent Institution section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized by the Office of Research and Statistics. The data on Average Monthly Population, Institutional Activity, Evaluation Activity, and Discharges is manually compiled monthly by the Patuxent Office of Research and Evaluation based upon internal institution reports (see tables at pages 66 and 67). The Inmate Characteristics Report (see tables at pages 45 thru 51 of the Division of Correction section of this publication) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that the manual population data is used in the Sex Distribution table, at page 45 of this publication, to allow comparisons to be made between the actual population and the computerized count for Patuxent Institution. The remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During FY 1984, the Patuxent Institution average monthly total population has decreased from 609 to 605, which represents only a .7% decrease from the FY 1983 average. Of the total inmates in residence, the number of inmates committed as eligible persons has decreased by 10.3% from 507 in the beginning of FY 1984 to 455 at the end of the fiscal year while the number of inmates under evaluation during this period has increased by 30.4% from 112 to 146. The total number of Patuxent inmates under parole supervision has decreased by 1.1% from 89 in the beginning of FY 1984 to 88 at the end of the fiscal year. The DOC Housed Inmates category, which represents those DOC inmates that are temporarily housed at Patuxent but are not currently under evaluation for admission to Patuxent's program, has remained relatively constant at an average of 165 during FY 1984. (See Section I of tables at pages 66 and 67 .)

The total intake to Patuxent Institution during FY 1984 has increased by 8.8% to 271 as compared to 249 in FY 1983. Discharges during this period experienced growth from a total of 247 in FY 1983 to 288 in FY 1984 or an increase of 16.6%. Of particular note in the Discharge data is the lack of escapes during FY 1983 and FY 1984.

The Inmate Characteristics of the Patuxent population as of the end of FY 1984 were relatively unchanged from the end of FY 1983. (See tables at pages 45 thru 51 of the Division of Correction section of this publication.)

CRIMINAL JUSTICE AGENCY PROCESSING STATISTICS

INTRODUCTION

IN AN EFFORT TO ASSIST DECISION MAKERS, THE OFFICE OF RESEARCH AND STATISTICS DEVELOPED THIS DOCUMENT TO PROVIDE A SYNOPSIS OF THE TRENDS IN CRIMINAL JUSTICE PROCESSING STATISTICS WHICH HAVE OCCURRED OVER THE MOST RECENT CALENDAR YEARS. AN EFFORT HAS BEEN MADE TO CAPTURE ON A MONTHLY BASIS STATISTICAL DATA WHICH PROVIDES SOME INDICATORS AS TO THE CHANGES IN OFFENSE AND ARREST PATTERNS, LOCAL JAIL POPULATIONS, PAROLE AND PROBATION CASELOADS, STATE CORRECTIONAL INSTITUTION POPULATIONS AND PAROLING AUTHORITY ACTIVITIES. IN EACH SECTION OF THE REPORT A BRIEF DESCRIPTION OF THE DATA SOURCES AND RECENT TRENDS IS PRESENTED. THIS REPORT ACTS AS A REPRESENTATION OF THE EVENTS WHICH HAVE OCCURRED OVER THE PAST TWO CALENDAR YEARS. CAUSE-EFFECT RELATIONSHIPS CANNOT BE DRAWN FROM THE VARIOUS DATA PRESENTED. HOWEVER, RELATIONSHIPS IN TRENDS CAN AID USERS OF THIS DOCUMENT IN OBTAINING AN INDICATION OF POSSIBLE FUTURE TRENDS.

OFFENSES AND ARRESTS

Data Sources

The information contained in the offenses and arrests section of the Agency Processing Statistics is based upon data tabulated through the State-wide Uniform Crime Reporting program managed by the Maryland State Police Criminal Records Central Repository (CRCR). Each month, summary data on offenses and arrests is compiled and submitted to CRCR by each of Maryland's 134 law enforcement agencies. These reports are edited and prepared for data entry. Computer generated output reports are produced to summarize the information received in a variety of formats. CRCR then provides monthly summaries of the offense and arrest data to the Office of Research and Statistics.

Comparisons of data trends occurring between CY 1984 and CY 1983 have been graphically depicted in charts. Due to the time taken to submit and compile this data, only the first 9 months of Calendar Year 1984 is available at this time. Index Offenses - Total, Property and Violent are displayed (page 4) as well as a comparison of Total Offenses (reported) and Adult Arrests (page 5). Data associated with these graphs is provided in tables for each calendar year (pages 6 and 7). A quarterly comparison of the changes in reported index offenses over these two calendar years is also provided (page 8).

Recent Trends

Total offenses were down 2.9% from 171,702 in the first 9 months of CY 1983 to 166,808 in the first 9 months of CY 1984. This decreasing trend did not occur in the index crime categories of Rape (which increased from 1,061 in CY 1983 to 1,222 in CY 1984, a 15.2% increase), Aggravated Assault (which increased from 13,686 to 14,243 between CY 1983 and CY 1984, a 4.1% increase), and Motor Vehicle Theft (which increased from 11,220 to 12,450 between CY 1983 and CY 1984, a 11.0% increase). Combined categories of offense data show that violent offenses (murder, rape, robbery and aggravated assault) decreased 2.8% from 25,802 in the first 9 months of CY 1983 to 25,067 for the first 9 months of CY 1984. Property Offenses (burglary, larceny and motor vehicle theft) decreased 2.9% from 145,900 in the first 9 months of 1983 to 141,741 in the first 9 months of 1984. See pages 4, 6, 7, and 8.

Adult arrests (those individuals 18 and over) decreased 4.3% from 129,311 in the first 9 months of CY 1983 to 123,761 in the first 9 months of CY 1984. This decline reverses the previous trend of increasing adult arrests over recent calendar years. The chart on page 5 depicts the monthly adult arrest trend based on the data in the tables on pages 6 and 7. It should be noted that the offense data is collected for only index crimes (murder, rape, robbery, aggravated assault, burglary, larceny and motor vehicle theft) and only when they are reported. Arrest data encompasses not only index crimes but other crimes. These other crimes are generally considered less serious and include such offenses as simple assault, possession or sale of drugs, sex offenses other than rape, weapons possession, fraud, vandalism, etc. These two sets of data (offenses and arrests) are mutually exclusive and difficult to compare to each other. Therefore, no direct relationship between these two divergent trends can be drawn.

Data on juvenile arrests (those individuals 17 years old or younger), see tables on pages 6 and 7, shows a declining trend. The number of juveniles arrested in the first 9 months of CY 1984 was 28,691, a 3.3% decrease from the 29,667 juveniles arrested in the first 9 months of CY 1983. The number of juvenile arrests for the first 9 months of CY 1982 was 33,246 indicating this decrease to be a continuing trend.

**THE JANUARY THRU SEPTEMBER CY 1984 DATA IS PRELIMINARY.

LOCAL JAIL STATISTICS

DATA SOURCES

The information contained in this section of the Agency Processing Statistics is derived from State-wide manual data collection efforts by the staff of the Maryland Commission on Correctional Standards. Commission staff tabulates and summarizes data submitted by local jurisdictions. State-wide aggregate data reflecting monthly trends for Calendar Years 1983 and 1984, spanning all local jurisdictions, are graphically displayed in the following charts: Average Daily Population in Local Jails, Local Versus DOC Sentenced Inmates, and Awaiting Trial, PSI and Other (Jail Population) on pages 10 to 12. The calendar year data (1983-1984) used to derive these charts is presented in the tables on page 13. The State-wide Average Daily Population is calculated by Commission staff. Data on the status of local jail prisoners (sentenced, awaiting trial, etc.), the intake and the departures represent end of month actual counts forwarded to the Commission and aggregated.

RECENT TRENDS

The average daily population in local jails for CY 1984 stabilized at 4,563 after several years of increases (average daily population CY 1981 - 3,918; CY 1982 - 4,394; CY 1983 - 4,577). This apparent stabilization is also observed in a reduction in the growth of total annual increases in intakes between calendar years (CY 1980 - CY 1981 intakes increased by 8,418; CY 1981 - CY 1982 intakes increased by 8,972; CY 1982 - CY 1983 intakes increased by 1,745; CY 1983 - CY 1984 intakes increased by 653). The ratio of departures to intakes approached parity during the last two calendar years so that the departures and intakes are nearly equal. Within this stabilization, counteracting trends exist. The locally sentenced component of jail population increased 12.1% (CY 1984 - 1,469; CY 1983 - 1,310) while the total for local jail prisoners in a before commitment status (Awaiting Trial, PSI and Other) decreased 5.4% (CY 1984 - 2,962; CY 1983 - 3,132).

The graphic representation of the data reflect the seasonal processing patterns of the local jail population with a peak population in late winter. Caution must be used in extrapolating this data in the context of local conditions at each jail and detention center.

PAROLE AND PROBATION STATISTICS

Data Sources

The information contained in the Division of Parole and Probation section of the Agency Processing Statistics is based upon a combination of manual and automated information systems that are summarized on a State-wide basis by the Office of Research and Statistics. From January, 1983 through January of 1984, the Cases Under Active Supervision (see charts at pages 20 & 21 and tables at pages 26 & 27) and Cases Being Administered (see charts at pages 22 & 23 and tables at pages 28 & 29) were manually compiled by all supervision agents for their individual caseloads as of the last day of each month and totalled by the Division's Headquarters staff in the Division's Monthly Workload Summary Report. Beginning in February, 1984, the Division of Parole and Probation converted from using manually collected data to relying on the OBSCIS II automated system for reporting the supervision workload. Similarly, the intake data (see charts at pages 16 & 17 and tables at pages 18 & 19) for Calendar Year 1983 was manually compiled, but the intake data for Calendar Year 1984 was extracted from the OBSCIS II automated system. Case Closings data (see charts at pages 18 & 19 and tables at pages 18 & 19) was derived by means of a formula comparing intakes to monthly changes in the Cases Being Administered totals.

Recent Trends

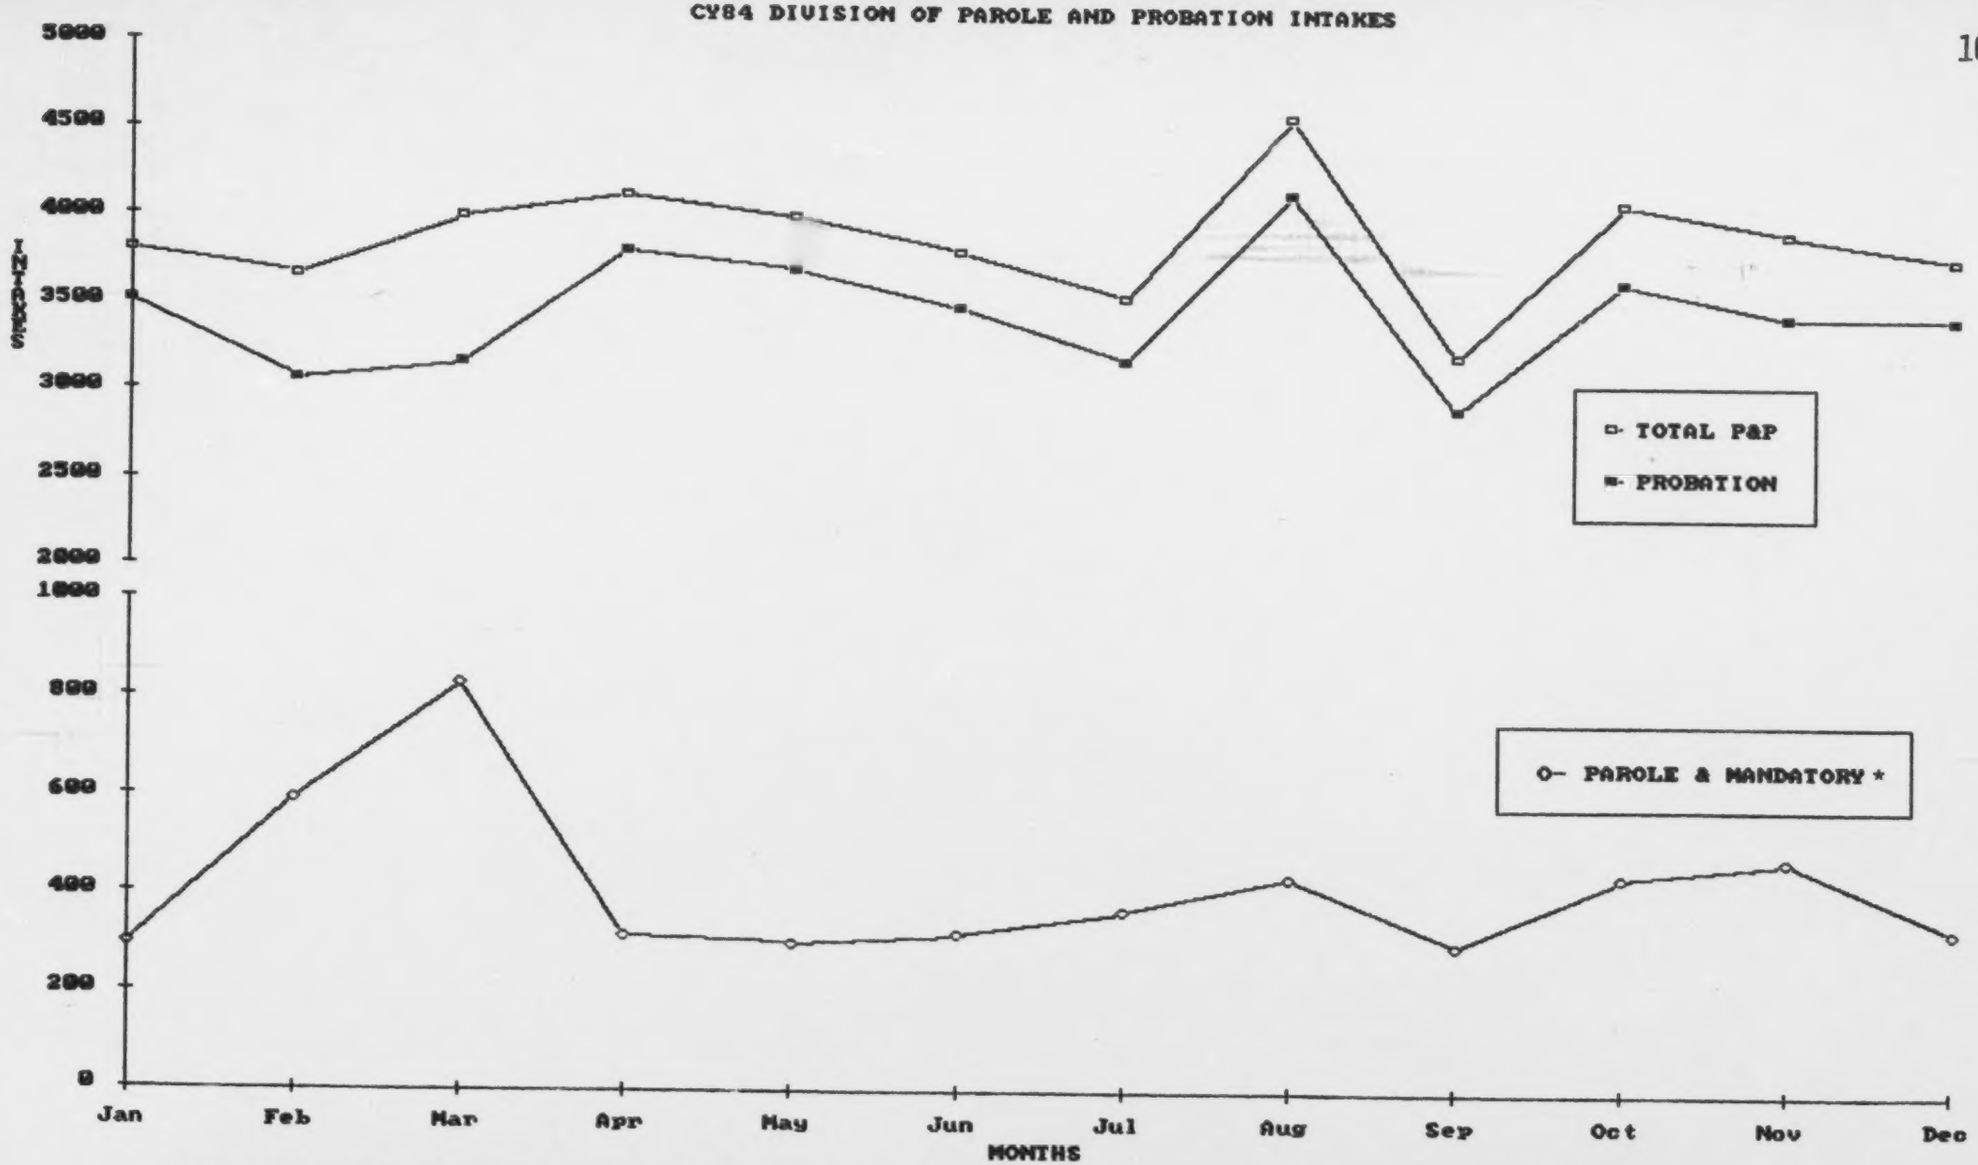
During Calendar Year 1984, the Division's Cases Under Active Supervision fell from 48,730 to 46,028 cases, representing an annual decrease of 5.5%. This compares to an annual growth of 16.7% in Calendar Year 1983 (see charts at pages 20 & 21 and tables at pages 26 & 27). While Active Cases went down somewhat in Calendar Year 1984, Total Cases Being Administered by the Division increased 6.2%, from 74,932 to 79,605 cases. In Calendar Year 1983 the increase was 18.2% (see charts at pages 22 & 23 and tables at pages 28 & 29).

The primary factor contributing to the lower percentage increase in Total Cases Administered during Calendar Year 1984 was a contrasting trend of Intakes and Closings. The total number of case intakes processed during Calendar Year 1984 was almost identical to that of Calendar Year 1983, while case closings in Calendar Year 1984 grew from 34,865 to 41,692, an increase of 19.6%. This significantly reduced the gap between Intakes and Closings, causing some leveling in the previously dramatic growth patterns experienced in Calendar Year 1983.

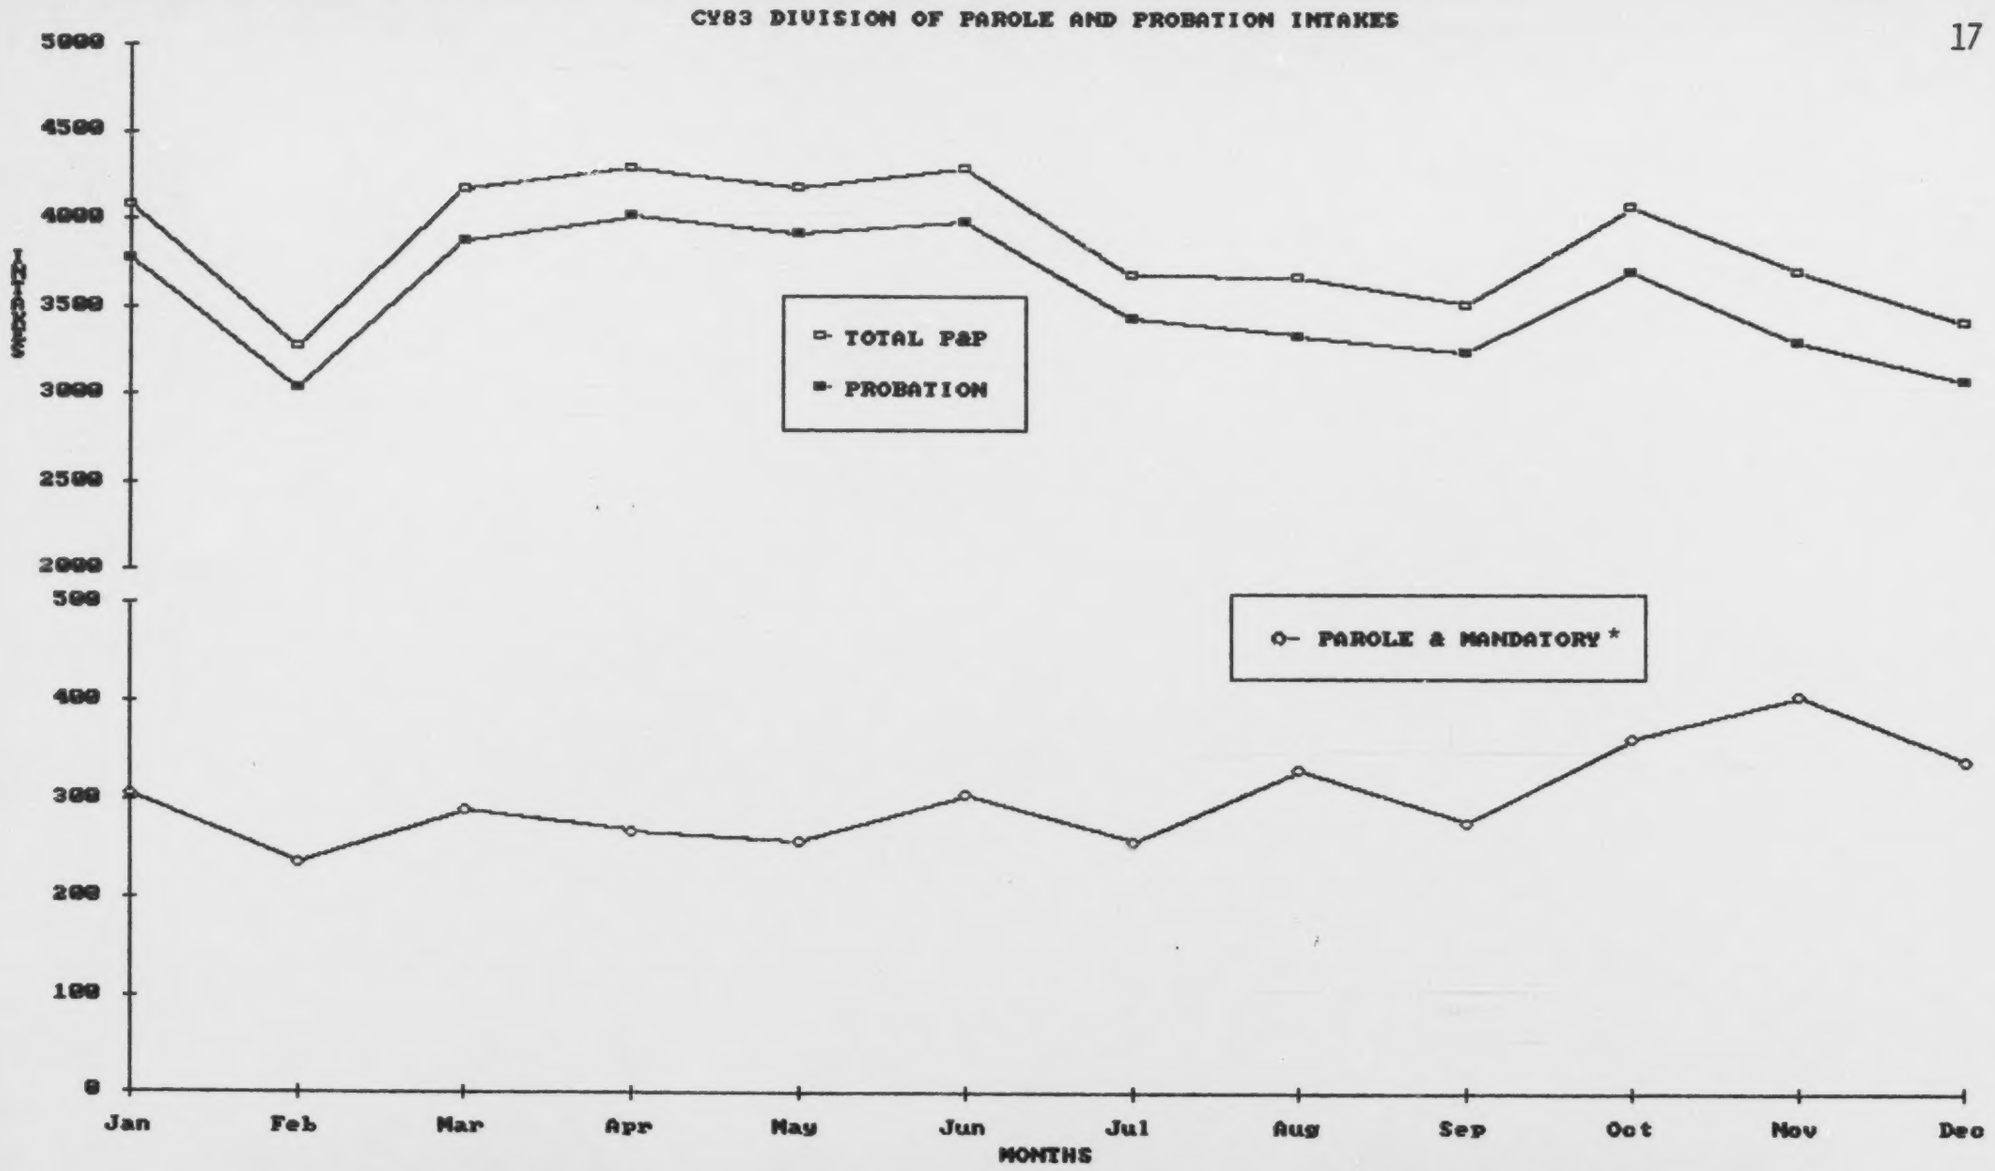
The intake area that continues to grow at a rapid pace is mandatory release, which went from 1,758 cases in Calendar Year 1983 to 2,912 in Calendar Year 1984, a 65.6% increase. This mandatory release intake growth caused the active mandatory case counts to go up by 114%, from 445 at the end of Calendar Year 1983 to 954 at the end of Calendar Year 1984. Although this overall growth trend is supported by the Division of Correction data, the conversion of manual to automated data by the Division of Parole and Probation has created the erroneous impression that most of this growth occurred in February and March of 1984. In reality, this growth has been occurring in a relatively uniform fashion over the last two calendar years.

The increase in Cases Being Administered and the simultaneous decrease in Cases Under Active Supervision reflects a steadily growing percentage of non-active and delinquent cases in the Cases Being Administered category. At the end of Calendar Year 1983, 65% of the Cases Being Administered were in an Active status (i.e. not delinquent or non-active). By the end of Calendar Year 1984, only 57.8% of the Total Cases Being Administered were under active supervision.

CY84 DIVISION OF PAROLE AND PROBATION INTAKES



*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction.



*Please note that the growth in this category is primarily the result of additional intake from Mandatory Releases from the Division of Correction.

DIVISION OF CORRECTION STATISTICS

Data Sources

The information contained in the Division of Correction section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized at the Office of Research and Statistics. The monthly average total populations (see charts at pages 32, 33 & 35 and table at page 38) are calculated from daily population sheets submitted by the Data Processing Office of the Division of Correction. The daily population sheets are manually compiled at Division Headquarters based on telephone reports from each institution. Intake and Release information (see charts at pages 32, 33, 34, 36, & 37 and tables at pages 39 & 40) is compiled from monthly reports sent to the Research and Statistics Office by the individual DOC institutions. Average sentence length by jurisdiction and life and death sentence by jurisdiction information (see tables at pages 41, 42, 43 & 44) is based upon information from the male and female reception centers. This information is also received monthly and applies only to new court commitments.

The Inmate Characteristics Report (see tables at pages 45 thru 51) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS). The only exception is that manual population data is used in the Sex Distribution table at page 45 to allow comparisons to be made between the actual population and the computerized counts for each institution. All of the remaining characteristic information is extracted from OBSCIS via a computerized data interface software package.

Recent Trends

During CY 1984, the Division's average daily total population has grown from 12,084 (January 1984) to 12,612 (December 1984), which represents a 4.4% increase over that period. It is notable that the Division's rate of population growth is continuing to decline from the 16.7% rate of growth that occurred in CY 1982 and the 8.9% increase during CY 1983. Population data is displayed on the charts at pages 32, 33, & 35.

The most significant factors contributing to continuing population growth are the contrasting trends of intakes and releases during CY 1984. Total intakes numbered 5,827 or 486 per month during CY 1984, while releases for the same period were 5,183 or 432 per month. Total intakes during CY 1984 are 5.1% lower than during CY 1983, while total releases have increased by 3.5%. Intake and release information is presented on data tables at pages 39 & 40 and the charts at pages 32, 33 & 34.

Escape releases, presented on the data tables at pages 39 & 40 and the chart on page 37, have been reduced by 16.2% from 111 in CY 1983 to 93 in CY 1984. Expiration/mandatory releases have increased by 17.2% from 2,296 in CY 1983 to 2,690 in CY 1984. Parole releases during this same period have decreased by 9.6% from 1,640 to 1,482 (see data tables at pages 39 & 40 and charts at page 36).

The average length of sentence for new court commitments (see tables at pages 41 and 43) has declined by 5 months from 61 in CY 1983 to 56 in CY 1984. Life sentences to the Division have increased by 15.5% from 71 in CY 1983 to 82 in CY 1984. Death sentences during the same period increased from 0 to 7 (see tables at pages 42 & 44).

The Inmate Characteristics of the Division's population as of the end of CY 1984 are nearly unchanged from the end of CY 1983. The average sentence length of inmates incarcerated at year end increased by 3 months from 132 months at the end of CY 1983 to 135 months at the close of CY 1984. The age, sentence, race and offense distributions have remained virtually unchanged.

a
DOC SENTENCED INMATES IN LOCAL JAILS (INCLUDED IN MONTHLY TOTALS) ARE INDICATED BY PARENS AND INCLUDES BOTH MALES AND FEMALES WHEN APPLICABLE.

b
AVERAGES FROM JANUARY 1977 UNTIL JUNE OF 1978 WERE CALCULATED BY ADDING THE POPULATIONS ON THE 1ST, 10TH, AND 20TH OF THE RESPECTIVE MONTH AND DIVIDING BY 3.

c
AVERAGES SINCE JUNE OF 1978 ARE BASED ON THE TOTAL NUMBER OF DAYS IN THE RESPECTIVE MONTH FOR WHICH A POPULATION REPORT WAS RECEIVED.

*THE NUMBERS (#) LISTED FOR EACH JURISDICTION REPRESENT THE ACTUAL NUMBER OF COURT COMMITMENTS FOR THE RESPECTIVE MONTHS NOT INCLUDING LIFE SENTENCES AND DEATH SENTENCES. THE AVERAGE LENGTHS OF SENTENCE (AVG. LOS) WERE CALCULATED USING THE HIGH RANGE OF THE FOLLOWING SENTENCE RANGES: 3 MONTHS, 4-6 MONTHS, 7-12 MONTHS, 13-18 MONTHS, 19-24 MONTHS, 25-36 MONTHS, 61-96 MONTHS, 97-120 MONTHS, 121-180 MONTHS, 181 MONTHS AND OVER. THE HIGH RANGE WAS USED BECAUSE MOST SENTENCES FALL AT THE UPPER END OF EACH RANGE. 300 MONTHS WAS USED FOR THE 181 MONTHS AND OVER CATEGORY.

**ONE INMATE WAS ADMITTED UNDER THE INTERSTATE COMPACT AGREEMENT AND IS INCLUDED IN THE TOTAL FOR THIS MONTH.

*The totals for the inmate characteristics contained in this report, with the exception of the sex distribution table, represent the OBSCIS system data available for the respective categories on the date of the report. The totals on the Sex Distribution table represent the actual total population on the date of the report. Information for an additional 102 inmates housed in local jails is not available. The automated totals presented for Patuxent Institution are over counted by approximately 69 inmates due to data entry and coding inconsistencies.

*Average Sentence Length (Sent. Lgth.) is calculated based on Total Sentence Length and does not include Life Sentences. Average Length of Stay (Stay Lgth.) reflects the average length of time served in the Division as of the date of the report. This figure is not based on releases and may include time served at more than one institution.

**The length of stay at MRDCC includes previous time served by inmates returned from Parole, Mandatory, Escape and Patuxent releases. When these types of returns are excluded, the length of stay at MRDCC is approximately 2 months.

PAROLE COMMISSION STATISTICS

Data Sources

The information contained in the Parole Commission section of the Agency Processing Statistics is based upon data recorded by Parole Commissioners and Hearing Officers and tabulated monthly by Parole Commission staff from hearing dockets. Parole Commission activities relating to both Division of Correction and local jail inmates are reported. There are minor data inconsistencies amounting to less than one-half of a percent in aggregate between previously reported DOC related activities for Calendar Year 1983 and the current report for the same period.

The Parole Hearing data presented in charts at pages 54 through 60 and the tables at pages 63 and 64 are based upon the recommendations rendered by Parole Commission Hearing Officers and Parole Commissioners during an inmate's parole hearing. The four basic decisions that can be made are to 1) approve parole release; 2) refuse parole release; 3) reschedule the inmate for a rehearing at a later date; or 4) hold the decision in abeyance until further information is obtained to determine parole eligibility. The Parole Revocation Hearing dispositions presented in charts at pages 61 and 62 and the table at page 65 are based upon the decision rendered by Parole Commissioners when inmates have been charged with failing to comply with the conditions of their parole release. These charges of noncompliance with the conditions of release can be divided in two broad categories: New Offenses (where a parolee has been primarily charged with committing a new crime while under parole supervision) and Technical Violations (where a parolee is charged with failing to comply with such conditions of release as reporting to an agent, absconding from supervision, failing to attend treatment programs as directed, etc.). At the time of a revocation hearing, the Parole Commission can decide to revoke parole, continue parole supervision, hold the case for further information, or administratively close the case.

Recent Trends

During CY 1984, the Parole Commission conducted a total of 5,885 DOC parole hearings, which represents less than a percentage point decrease from CY 1983 totals (see chart page 56 and table at page 63). The rate of hearings resulting in parole approval or refusal stayed essentially the same (for approvals: 22.2% for CY 1983 vs. 22.0% for CY 1984; for refusals: 28.4% for CY 1983 vs. 28.3% for CY 1984). The rate of parole cases

to be reheard at a later date increased from 29.2% in CY 1983 to 33.8% in CY 1984. The rate of cases held dropped from 20.2% in CY 1983 to 15.8% in CY 1984.

During the past calendar year, the Parole Commission conducted parole hearings for 971 inmates located in the jails and in the detention centers for the 23 counties and Baltimore City (see Charts at pages 59 and 60 and Table at page 64). This represents a decrease of 3.0% from the CY 1983 total. The rate of parole approval decreased from 26.1% in CY 1983 to 24.7% in CY 1984. Similarly, the rate for inmates disapproved for parole decreased from 65.2% in CY 1983 to 63.5% in CY 1984. Rehearings scheduled increased from 3.1% in CY 1983 to 5.0% in CY 1984. Cases held for further information increased in CY 1984, from 5.6% of the total number of cases heard in CY 1983 to 6.7% of the total cases heard in CY 1984.

Parole revocation hearings for CY 1984 totaled 988 hearings, down 5.5% or 57 hearings from the CY 1983 total of 1,045 (see Charts at pages 61 & 62 and Table at page 65). The rate of cases continued on parole declined in CY 1984, from 19.8% of the total in CY 1983 to 18.3% of the total in CY 1984. Conversely, the rate of those revoked increased from 73.6% in CY 1983 to 74.8% in CY 1984. Cases held declined from 1.0% in CY 1983 to 0.6% in CY 1984. Of the 739 parolees revoked in CY 1984, 88.5% were revoked for new offenses and 11.5% were revoked for technical reasons. This represents only a small change from the CY 1983 rates of 90.8% and 9.2%, respectively.

PATUXENT INSTITUTION

Data Sources

The information contained in the Patuxent Institution section of the Agency Processing Statistics is based upon data from a combination of manual and automated information systems that are summarized by the Office of Research and Statistics. The data on Average Monthly Population, Institutional Activity, and Discharges is manually compiled monthly by the Patuxent Office of Research and Evaluation based upon internal institution reports (see tables at pages 67 and 68). The Inmates Characteristics Report (see tables at pages 45 thru 51 of the Division of Correction section of this publication) is based almost entirely upon data from the Offender Based State Correctional Information System (OBSCIS I). The only exception is that the manual population data is used in the Sex Distribution table, at page 45 of this publication, to allow comparisons to be made between the actual population and the computerized count for Patuxent Institution. The remaining characteristic information is extracted from OBSCIS I via a computerized data interface software package.

Recent Trends

During CY 1984, the Patuxent Institution average monthly total population has decreased from 608 to 603, which represents a .8% decrease from the CY 1983 average. Of the total inmates in residence, the number of inmates committed as eligible persons has decreased by 1.7% from 472 in the beginning of CY 1984 to 464 at the end of the calendar year while the number of inmates under evaluation during this period has increased by 17.4% from 121 to 142. The total number of Patuxent inmates under parole supervision has decreased by 10.6% from 94 in the beginning of CY 1984 to 84 at the end of the calendar year. The DOC Housed Inmates category, which represents those DOC inmates who are temporarily housed at Patuxent but are not currently under evaluation for admission to Patuxent's program, has decreased from an average of 165 during CY 1983 to an average of 131 during CY 1984. (See Section I of tables at pages 67 and 68.)

The total intake to Patuxent Institution during CY 1984 has increased by 11.3% to 286 as compared to 257 in CY 1983. Discharges during this period experienced some growth from a total of 269 in CY 1983 to 276 in CY 1984 or an increase of 2.6%. No escapes occurred during either CY 1983 or CY 1984. (See Section IV of the tables at pages 67 and 68.)*

The Inmate Characteristics of the Patuxent population as of the end of CY 1984 were relatively unchanged from the end of CY 1983. (See tables at pages 45 thru 51 of the Division of Correction section of this publication).

*It should be noted that the discharge data is limited to the residential population and does not include paroles of inmates transferred to the halfway house.
